AI as a Sensemaking Partner

When Value Streams Emerge from Within the System

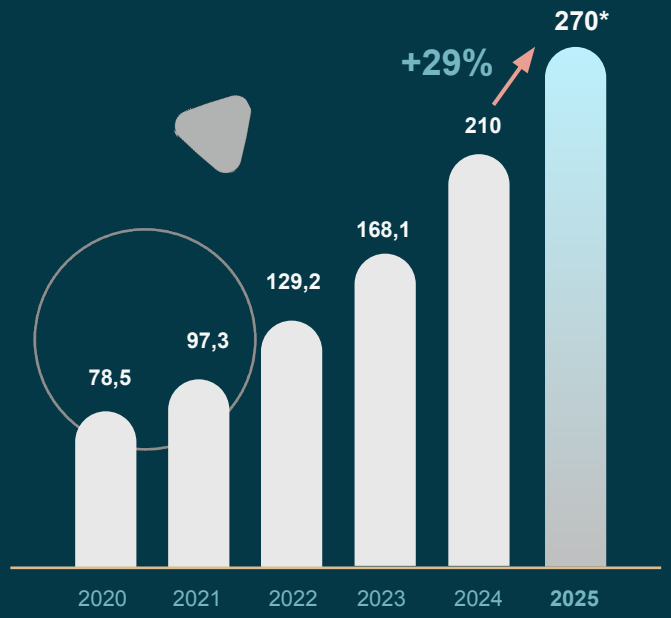
Culture and Talent Value Stream Lead
knowmad mood

Who is knowmad mood?

A system optimized for organic growth

Built to grow through **technology, talent, and delivery**.



*Unaudited figures, publicly disclosed to the market (BME Growth) as relevant information on February 9, 2026.

+30 **years** of experience growing

Global presence
Spain, Italy, Portugal, Uruguay, UK, USA, Morocco, Germany, Mexico and Ireland.

23 Technology **Communities**

16 **offices** worldwide

3000 Employees

1000+ Customers worldwide

11 Line of **Business**

20 **Commercial** Units

When Success Changes the Context

Nothing was broken. The system had outgrown its model.

BEFORE

- Organic Growth
- Local Delivery
- Spanish-Only System

Local optimization

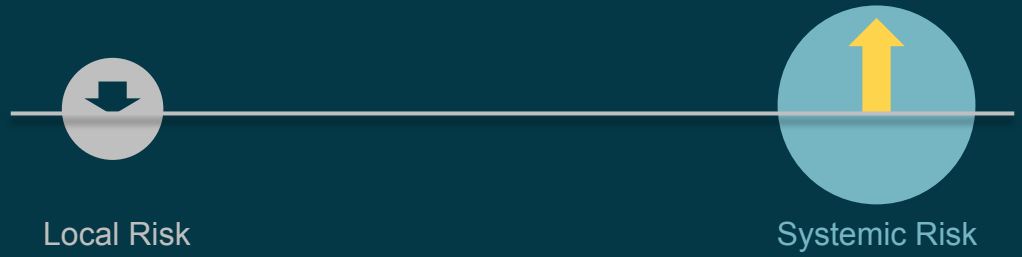
NOW

- Public Company
- Multi-Countries Delivery
- Global Partners

Scaling Friction

Structural Stress

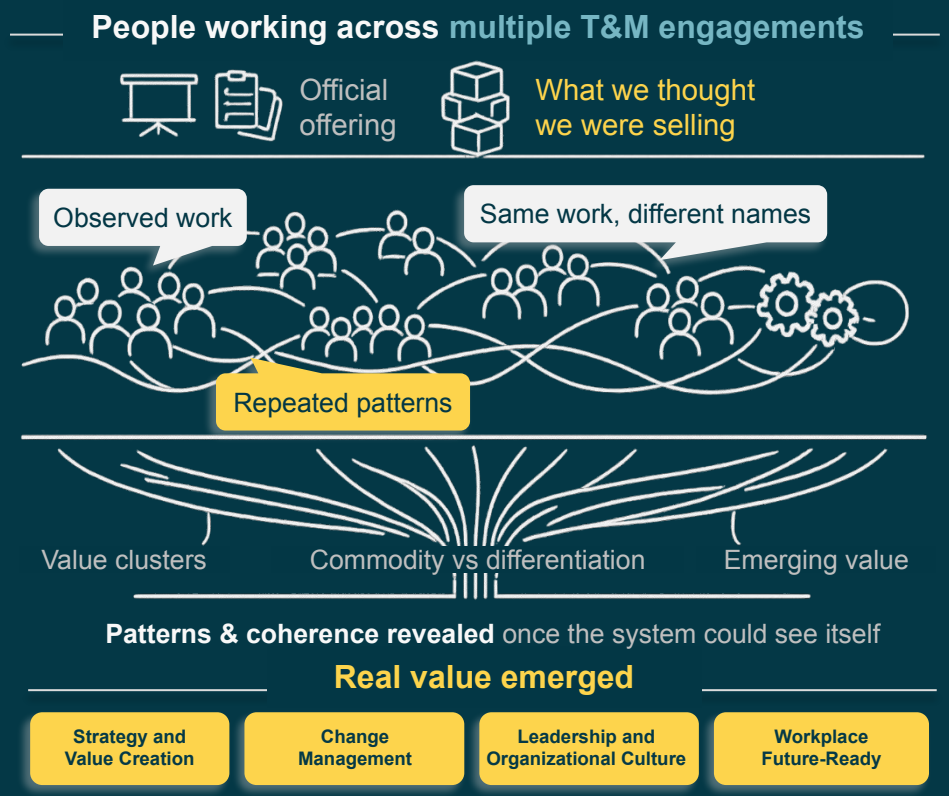
- Cross-country delivery demand
- Talent acquisition struggle
- Margin pressure



knowmad mood

Sensemaking inside the Culture & Talent Value Stream

Culture and Workplace at the center.



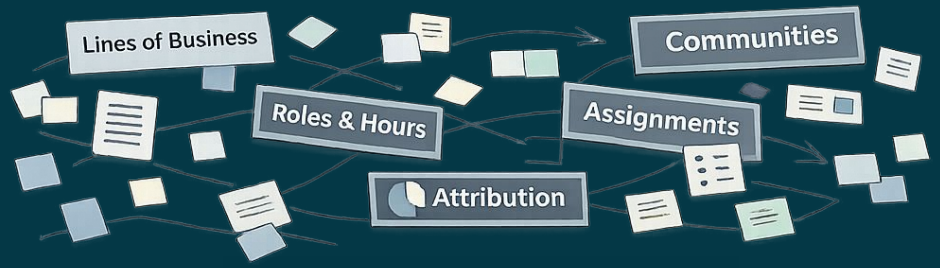
knowmad mood

We didn’t Design a Value Stream — We Discovered One

We realized we were already operating one

Internal fragmentation

The system optimized attribution — not value



Client reality

From the client’s perspective, value was already flowing

Delivery didn’t fail; it was built for a different kind of value — that’s why the backbone had to evolve

knowmad mood

MS3: The Delivery Backbone that Evolved T&M

A SAFe-contextualized operating model for services

System shifts required for MS3 to exist

- **Service-level ownership replaced local units**
- **Dual accountability aligned value & delivery**
- **Explicit governance protected flow**
- **Learning embedded in execution**

Principles in Motion — What We Actually Changed

The structural shifts required for MS3 to work

System Shift	SAFe Principle Activated
Service ownership replaced local staffing	#2 Apply systems thinking #10 Organize around value
Governance protecting flow	#6 Make value flow without interruptions #9 Decentralize decision-making
Dual accountability protected the service	#9 Decentralize decision-making #10 Organize around value
Learning became part of the service	#5 Base milestones on objective evaluation of working systems #8 Unlock the intrinsic motivation of knowledge workers

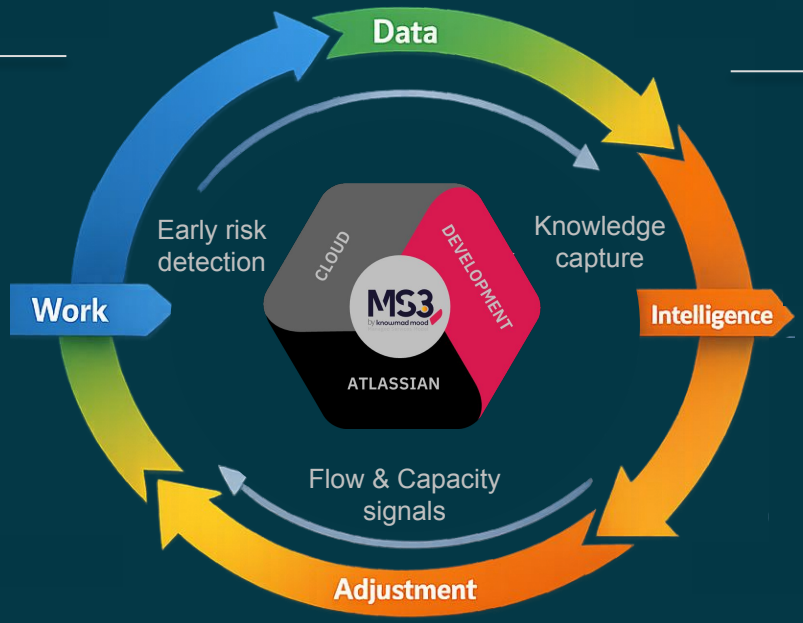
AI Moved from Sensemaking to Operations

Where AI operates while the service is running

Work happening inside the service

Real work

- Backlog & tickets
- Incidents
- Code changes
- Service requests
- Onboarding centers



Service adapts during delivery

- Faster onboarding
- Reduced dependencies
- Adaptive allocation
- Stable delivery
- Learning retained

knowmad mood

AI as an Execution Amplifier for Change

AI amplifies the Change Agent in the migration flow

Migrations

DC → Cloud

ServiceNow → Atlassian

Behavioral & adoption signals

AI amplifies the Change Agent during execution.

This is what happens when AI amplifies Change during execution

Where We Are Today

MS3 is evolving from service model to growth engine

Operating at Scale

- Volume expanding across value streams
- AI embedded in delivery loops

Emerging Complexity

- Talent mobility across services
- Cross-client portfolio orchestration

Structural Maturity

- Portfolio layer emerging across services
- Knowledge retained at system level

The system no longer optimizes attribution.
It is designed for flow at scale.

What You Can Do on Monday

Three shifts you can apply immediately

01 Sense value before structure

Read tensions, patterns, and relationships.

On Monday: Use AI-supported sensemaking to observe signals.

02 Protect flow structurally

Design governance, ownership, and funding.

On Monday: Look for value already moving across silos.

03 Use AI as a sensemaking partner

Embed AI where work and decisions happen..

On Monday: amplify human judgment, not replace it.

THANK YOU
