

The Product Mode Framework at the French Ministry of the Interior

Transforming Government through Product Mode

Track: SAFe® for Government & Regulated
Industries

Amine FENDRI

Head of the Business Applications Office
French Ministry of the Interior

Dr. Thomas QUARTIER

Government SPCT, Doctor in Business Administration
Capgemini

Why transforming digital delivery in government matters ?

Higher expectations from citizens

Government systems are becoming critical national infrastructure

Large-scale IT programs struggled with complexity, delays and limited user value

Digital at the Ministry of the Interior

300,000

Agents supported by digital
services

200

Digital
products

Millions of users

Citizens, residents and visa
applicants

Digital at the Ministry of the Interior

IDENTITY & PUBLIC ADMINISTRATION

- Biometrics
- Identity systems
- Elections
- Local government services

IMMIGRATION AND BORDER MANAGEMENT

- Residency permits
- Asylum systems
- Visa processing
- Border control

INTERNAL SECURITY

- Police and gendarmerie systems
- Criminal records
- Investigation tools

ROAD SAFETY

- Driver licensing
- Vehicle registration
- Road Safety data

CIVIL PROTECTION & CRISIS MANAGEMENT

- Emergency response systems
- Crisis management platforms

The Digital Transformation Directorate

Build & Run digital services

Critical systems supporting public policies

Build & Operate secure infrastructures

Sovereign cloud, datacenters, cybersecurity

Foster Innovation and data valorisation

Lean startup mode, AI development

Empower Ministry Agents

Digital work environment, platforms, AI capabilities

Lead Digital Transformation

Lean Agile, Product Mode, DevOps

Driving Innovation
and Digital
Transformation at
the Ministry of the
Interior

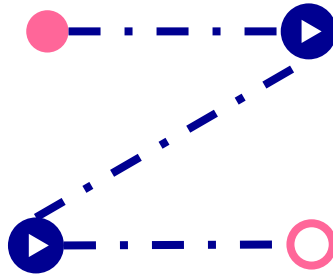

Limits of the project model

Long delivery cycles

Low adaptability

Large program complexity

Delayed user value

Why Government Services are Products, Not Projects

Laws constantly evolve

Public services must adapt to new laws and regulations every year

Users' expectations continuously increase

Systems must operate continuously

Government services are **never** "finished"

Government digital services are long-lived systems that must continuously evolve

Our Transformation Journey

1 - Lean-Agile Teams

Introducing Lean-Agile

Lean Startup used in It Labs and innovation
Lean-Agile adopted for a large-scale Program (ERPC)

2 – Product Organization

Structuring around products

Identification of digital products
Creation of product ownership roles
Teams aligned with products lines

3 – Continuous value Delivery

Scaling the Product Mode

New Business aligned large scale procurement
Portfolio organized around products
Digital factory for continuous delivery

The ERPC program : A Foundational SAFe Success for Product Mode Deployment

2019 ->
2023

15
teams

50+ M
users

**A major
success**

**A major Program using SAFe as
the primary framework**

**First large-scale SAFe
implementation at the Ministry, on
business-critical information
systems (road education and
driving license context)**

Scaling the Product Model

Agile Contracting

Focus on outcomes rather than fixed scope

Product-Aligned Organization

Product portfolios aligned with ministry missions

Skills & Training

Developing product and Agile capabilities

Digital Platforms

DevOps Platform teams, Digital factory, Centers of competence

It is not only
about
Frameworks !

Agile Contracting to Enable the Product Model

Integrated lifecycle contract

Build • Run • DevOps • Engineering

Business-aligned lots

Product areas instead of technology domains

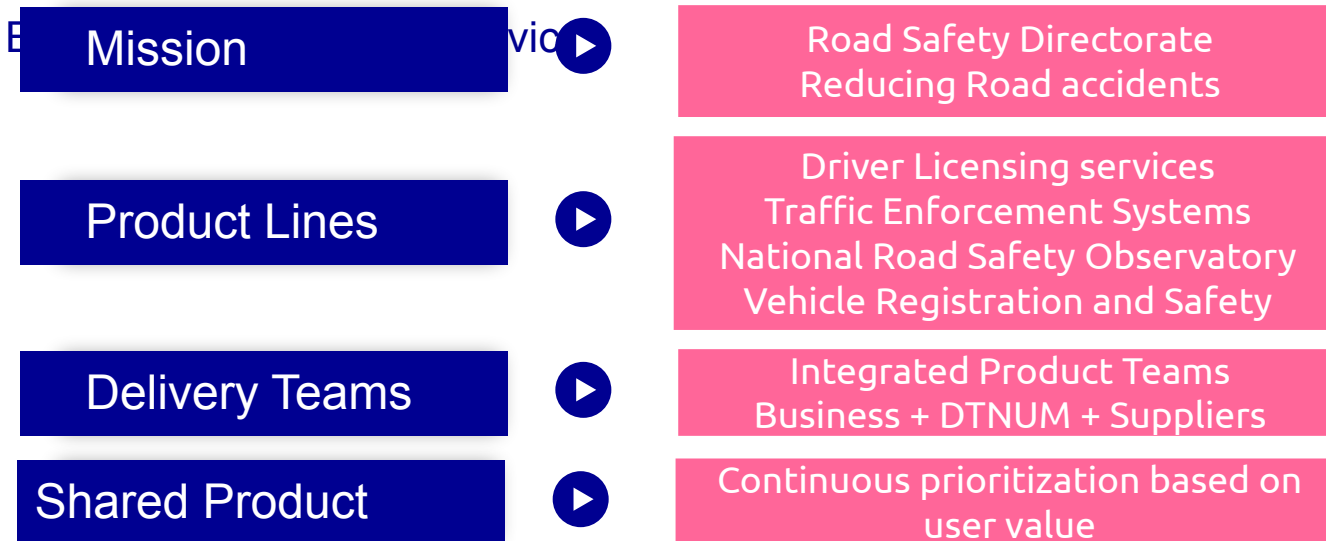

Lean-Agile as the default model

Iterative delivery and continuous improvement

Flexible delivery models

Lean-Agile preferred, V-cycle still possible

Aligning Teams Around Business Product Lines

From technology silos to mission-driven
product teams

Building Product and Agile Capabilities

Training the Organization

Large-scale product and Agile training

Value Management Office

Supporting portfolio and value governance

Communities of Practice

Sharing knowledge across teams

Product Competency Center

Supporting product teams and best practices

Enabling Product Teams with Platform Capabilities

Building a Digital Factory to support product delivery

Product

Delivering digital services

Digital Factory Platforms

DevOps

Observability

SRE

Security

Testing

Shared platforms enable scalable product delivery

Key Takeaways from Our Transformation

Lessons from the French Ministry of Interior

4 Lessons from our Journey

Start with a real success

ERPC proved that Lean-Agile can work in government.

Transform the system, not only the teams

Procurement, governance and engineering must evolve.

Align around missions

Product lines connect policy objectives and delivery teams.

Invest in platforms and skills

Digital factories and training enable continuous delivery.
