From Knowledge Chaos to **AI Readiness**

Why treating KM as a Product is your only path to scaling GenAI?

The Smart Assistant **Paradox**

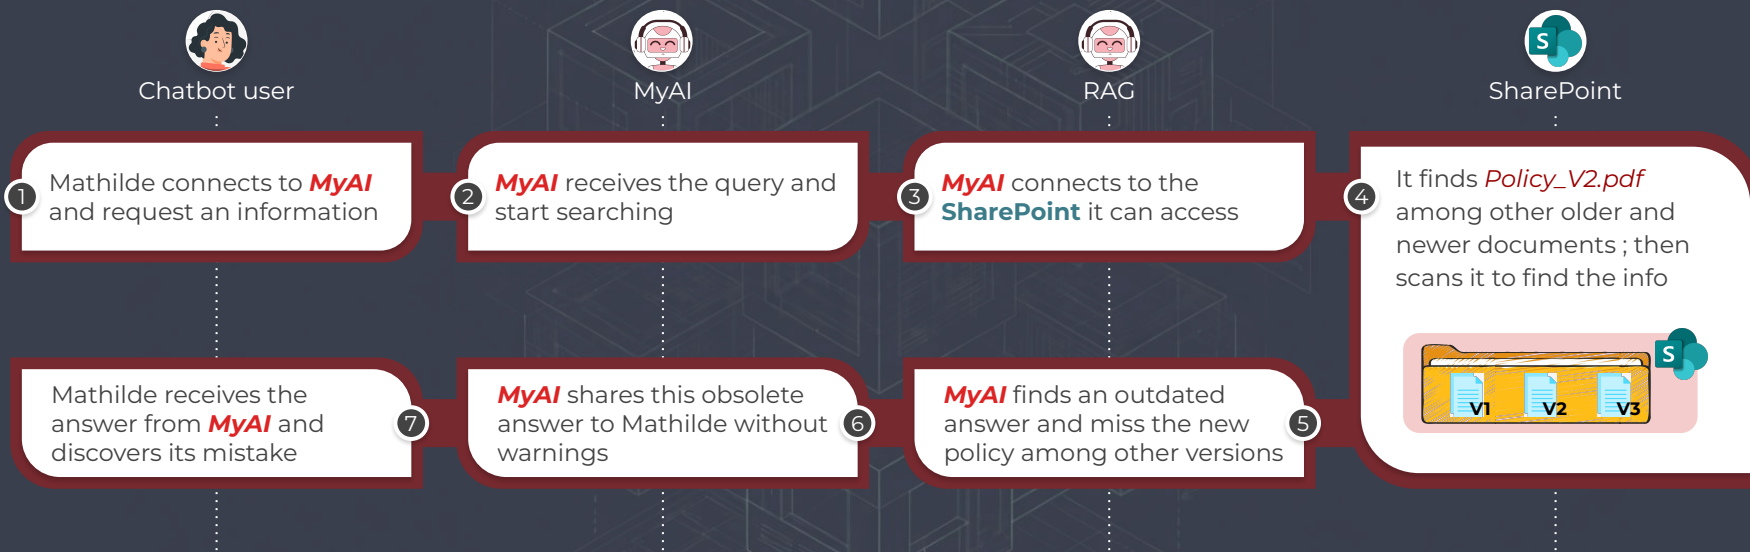

Great news! This
expense is covered ✓

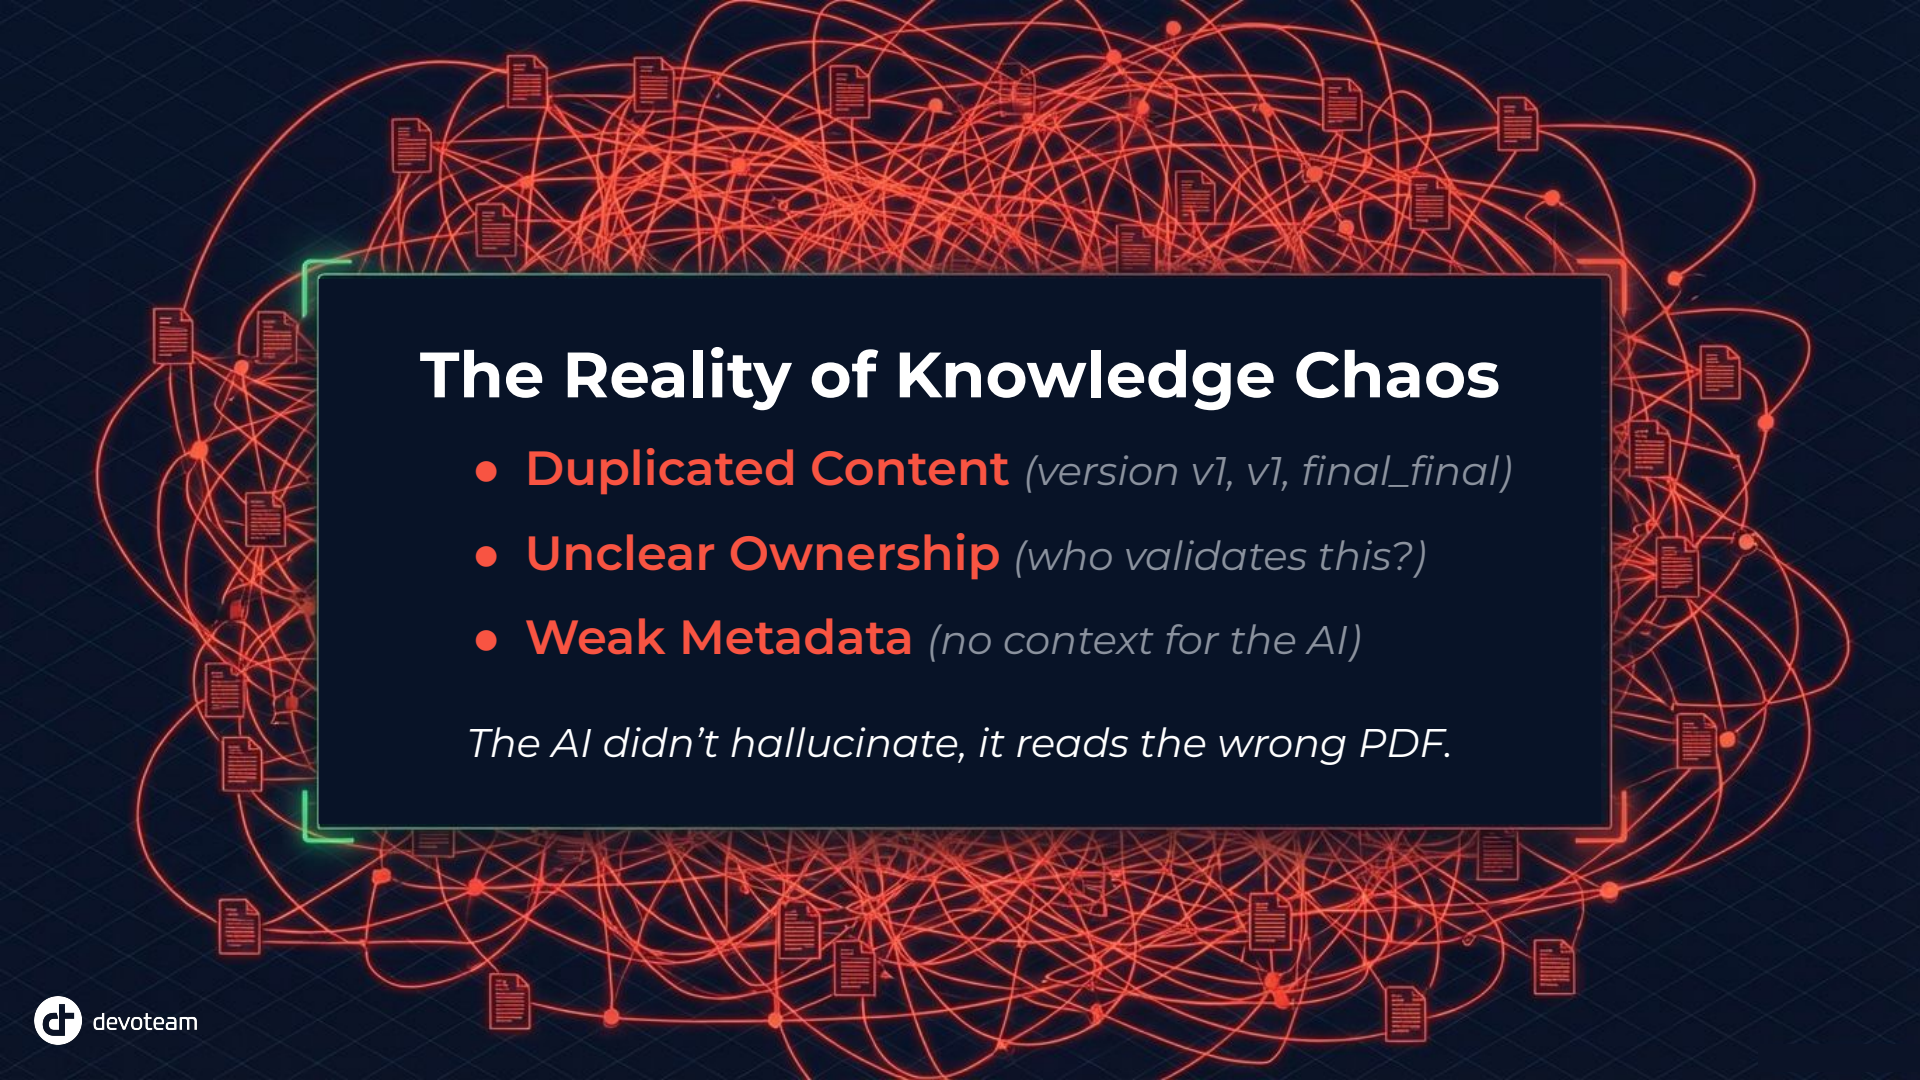

The Smart Assistant **Paradox**

Why state-of-the-art technology fails without managed knowledge?

✖ Let's illustrate a **RAG process without a proper KM!**

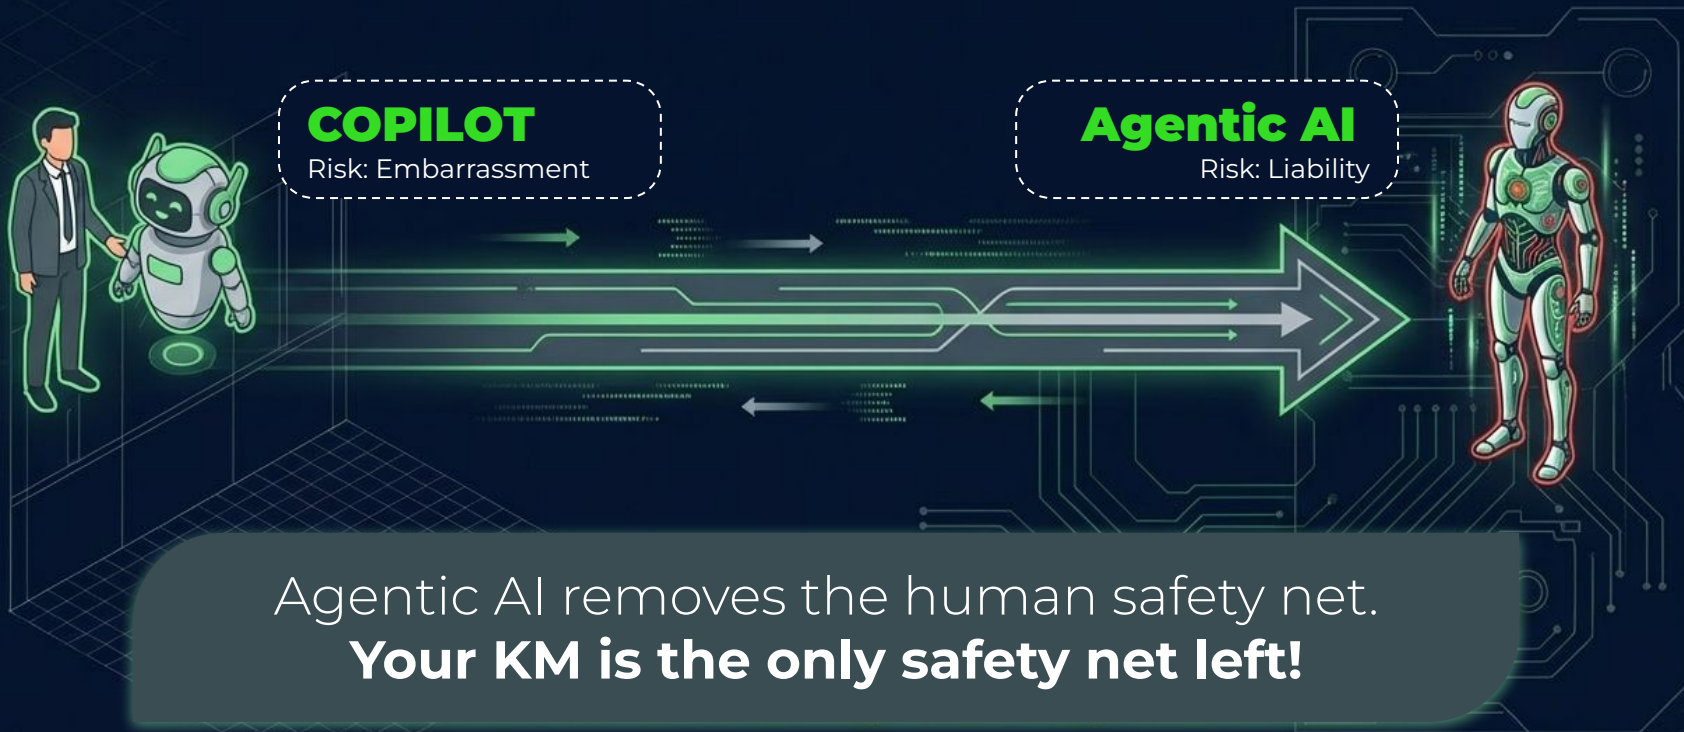

The Reality of Knowledge Chaos

- **Duplicated Content** (*version v1, v1, final_final*)
- **Unclear Ownership** (*who validates this?*)
- **Weak Metadata** (*no context for the AI*)

The AI didn't hallucinate, it reads the wrong PDF.

The Stakes are Rising

The Missing Link...

We have storage (bottom) and AI (top).

The Trust or the Governance Layer is the engine that refines raw oil into fuel.

AI Consumers

Trust Layer

Raw Sources

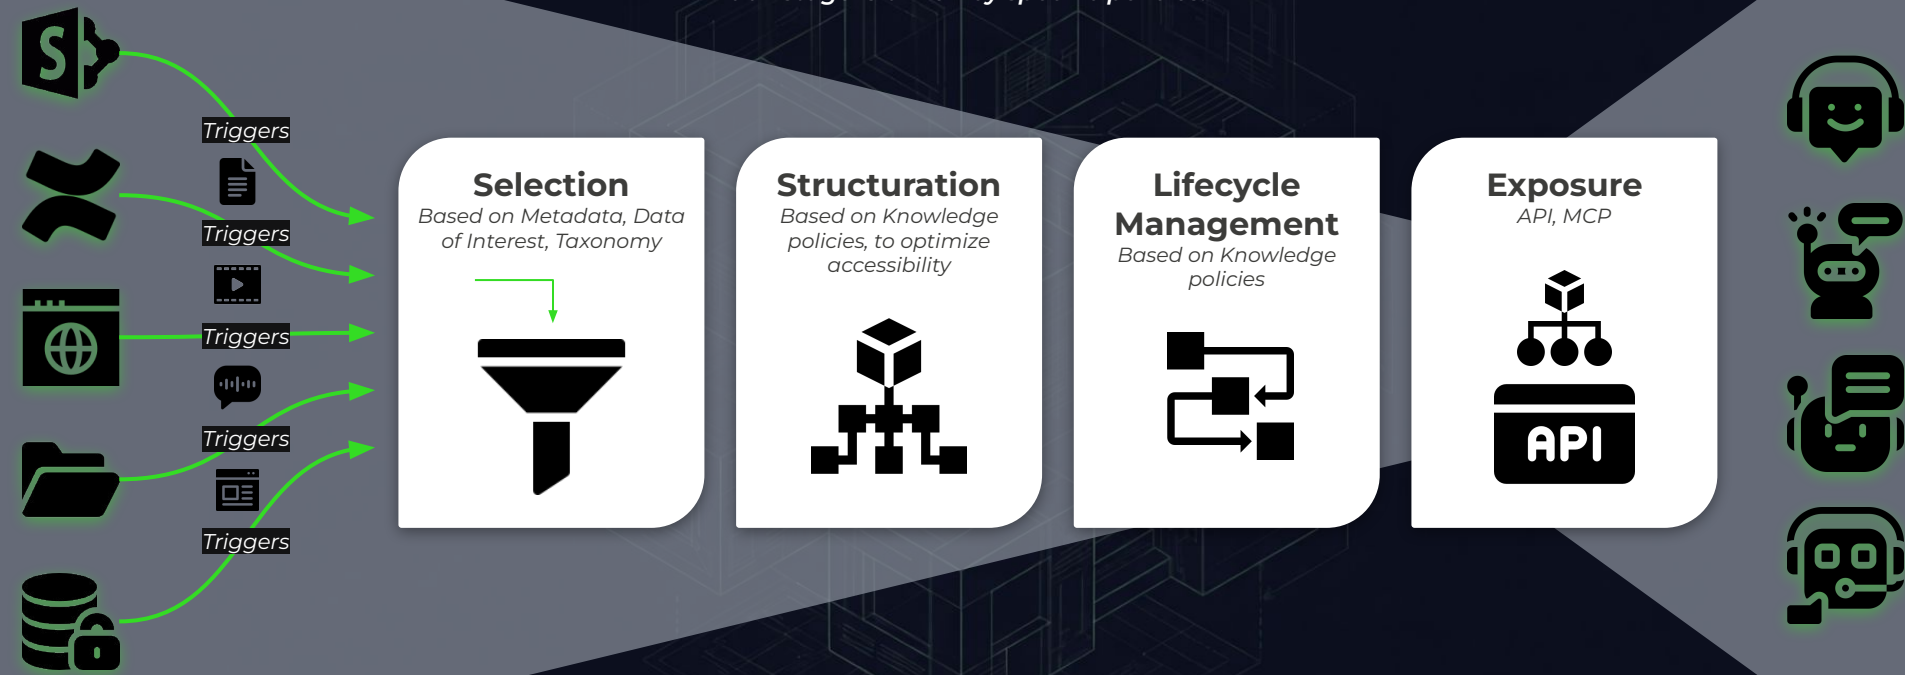

The Knowledge Lifecycle

Ensuring Information Freshness and Consumer Synchronization

This technical pipeline automates our governance workflow.

Each stage is driven by specific policies:

Stop Building Projects. **Start Managing Products.**

Projects

- One-Time Launches

DOCUMENT GRAVEYARD

Shift Mindset

Knowledge Products

- Continuous Learning

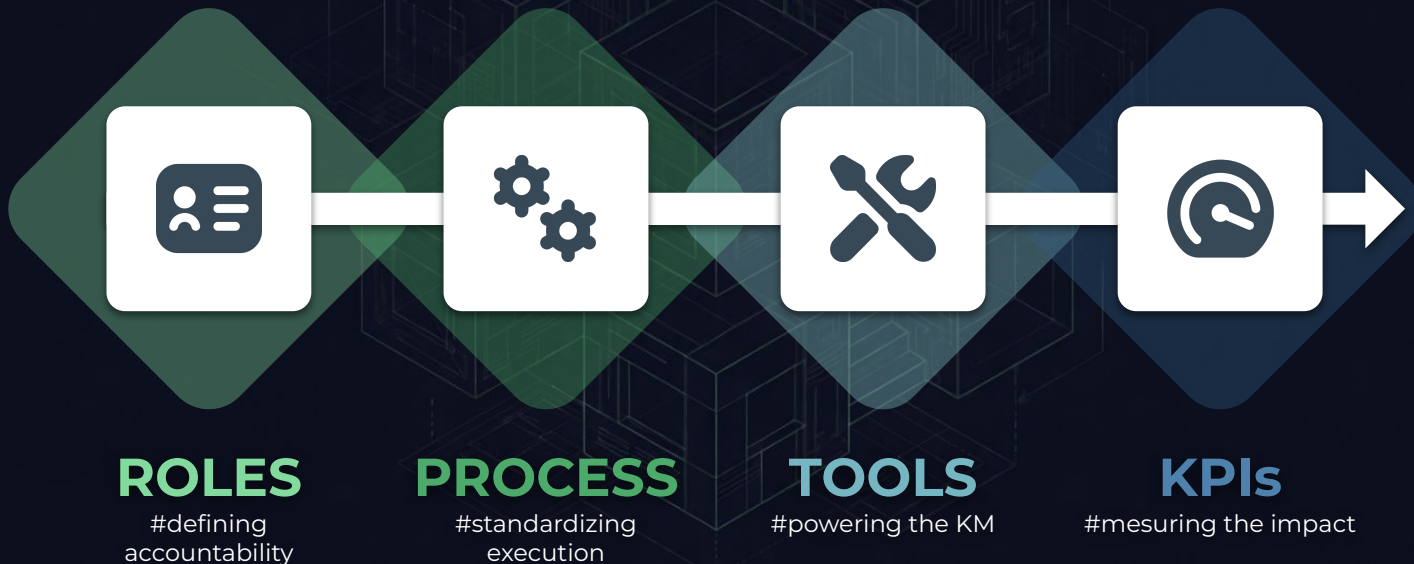

SMART AI SOLUTIONS

Understanding Knowledge Management

A strategic discipline built on four operational pillars

Knowledge Management is a strategic discipline aimed at **identifying, structuring, sharing and using knowledge within an organisation**. The main objective is to transform information to improve decision-making, operational efficiency and innovation, both for humans or AI.

Technology is easy. People are hard.

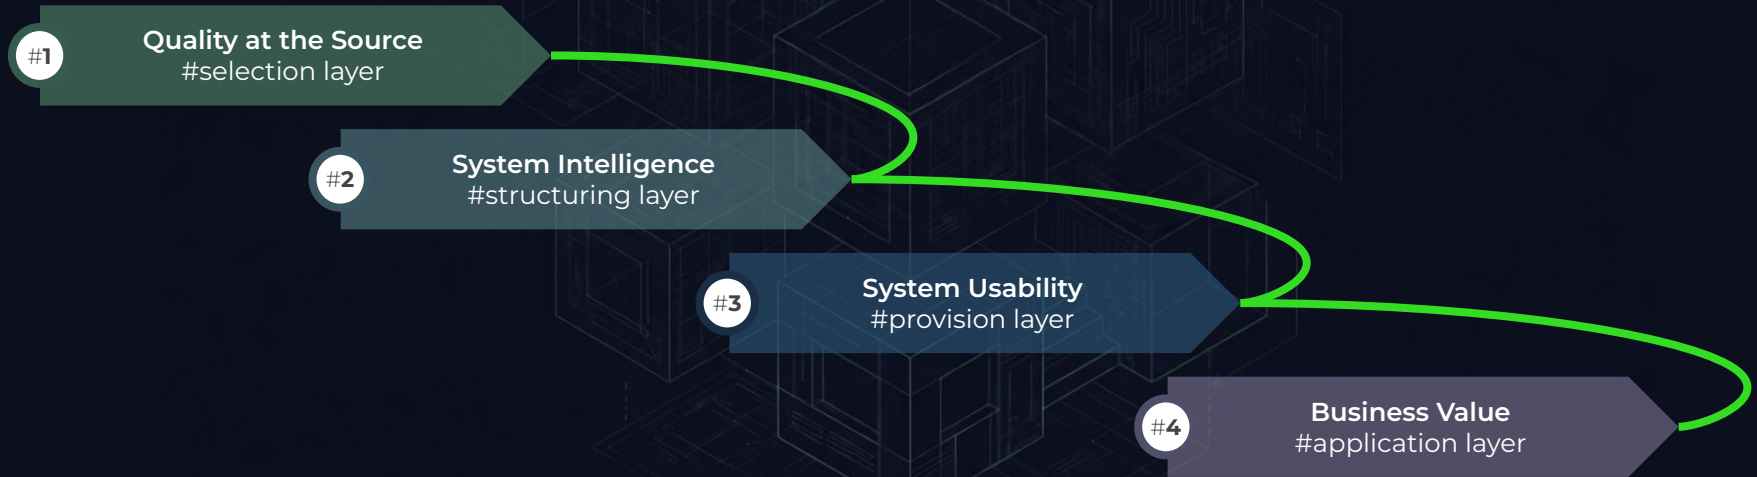

No owner = No access. We move from a file-based culture to a knowledge-based culture.

Metrics Measurement

To ensure the effectiveness of our Knowledge Management System and measure its real-world impact, we have built our performance framework to allow us to **track performance at each critical stage**: from the selection of raw information, to the delivery of tangible business value.

The Knowledge Manifest

At the heart of our governance framework lies the Knowledge Manifest. It acts as the **unique ID card and the absolute source of truth** for every knowledge asset

A Knowledge Manifest is the ID Card of a knowledge object. It includes a list of standardized combination of metadata which acts as the absolute source of truth for identification and traceability.

Knowledge Catalog

Based on Metadata, Data of Interest, Taxonomy

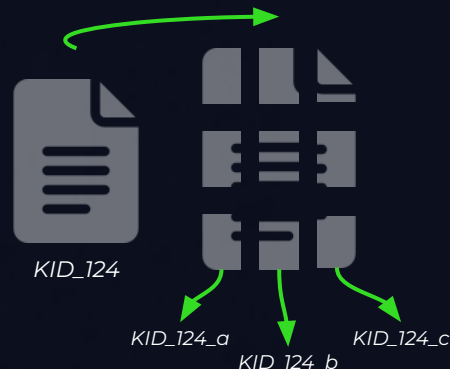

Knowledge Manifest

- * **KID:** A unique, immutable identifier within the KMS
- * **Version:** The version of the document
- * **Type:** Nature of the item (source document, Q&A, Summary note, etc)
- * **Parent_ID:** The ID of the source document this Knowledge item is created from, if applicable
- * **Status:** The current state of the knowledge item (Active, Archived, Deleted, etc.)
- * **Confidentiality:** Level of confidentiality
- * **Owner:** Name of the Knowledge owner
- * **Review date:** Date of the next scheduled review / update

non-exhaustive list

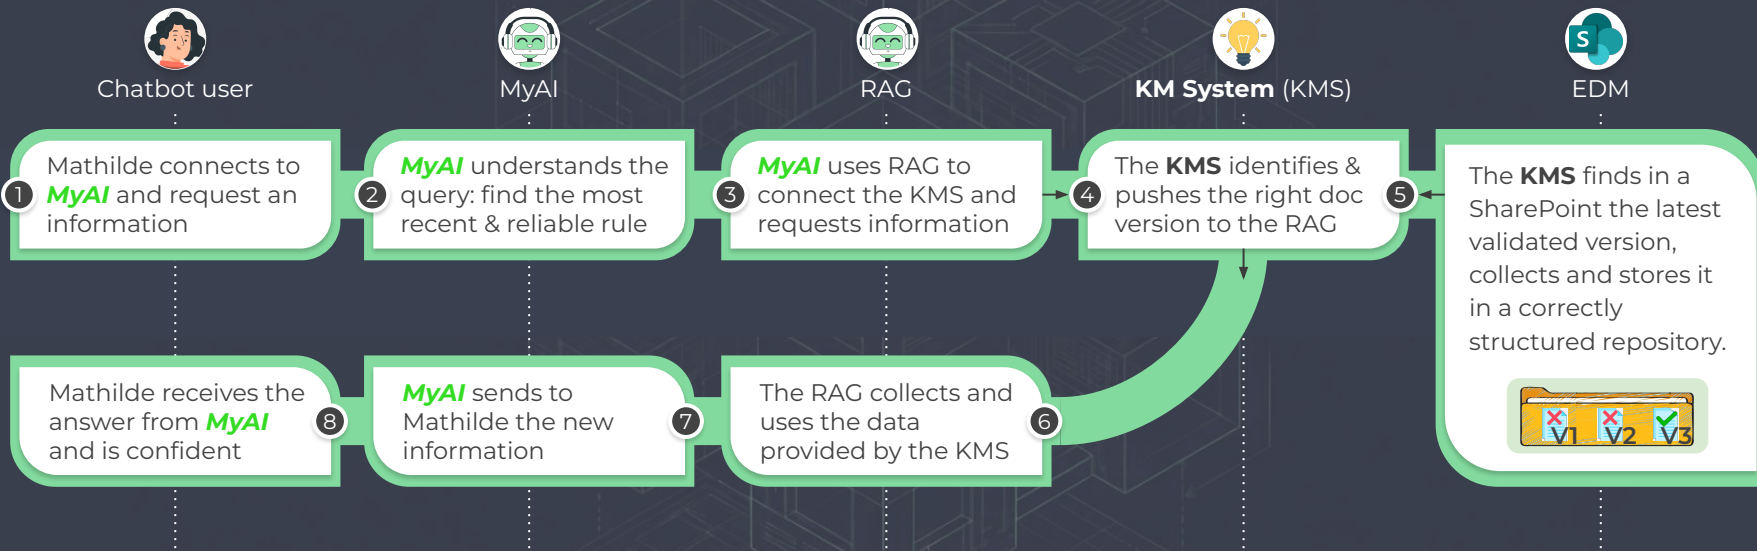

Source documents are broken into semantically coherent chunks for efficient AI consumption. Chunks inherit the parent document's KID (Knowledge ID) instead of having their own manifest, ensuring catalog cleanliness and traceability from the chunk to the original source.

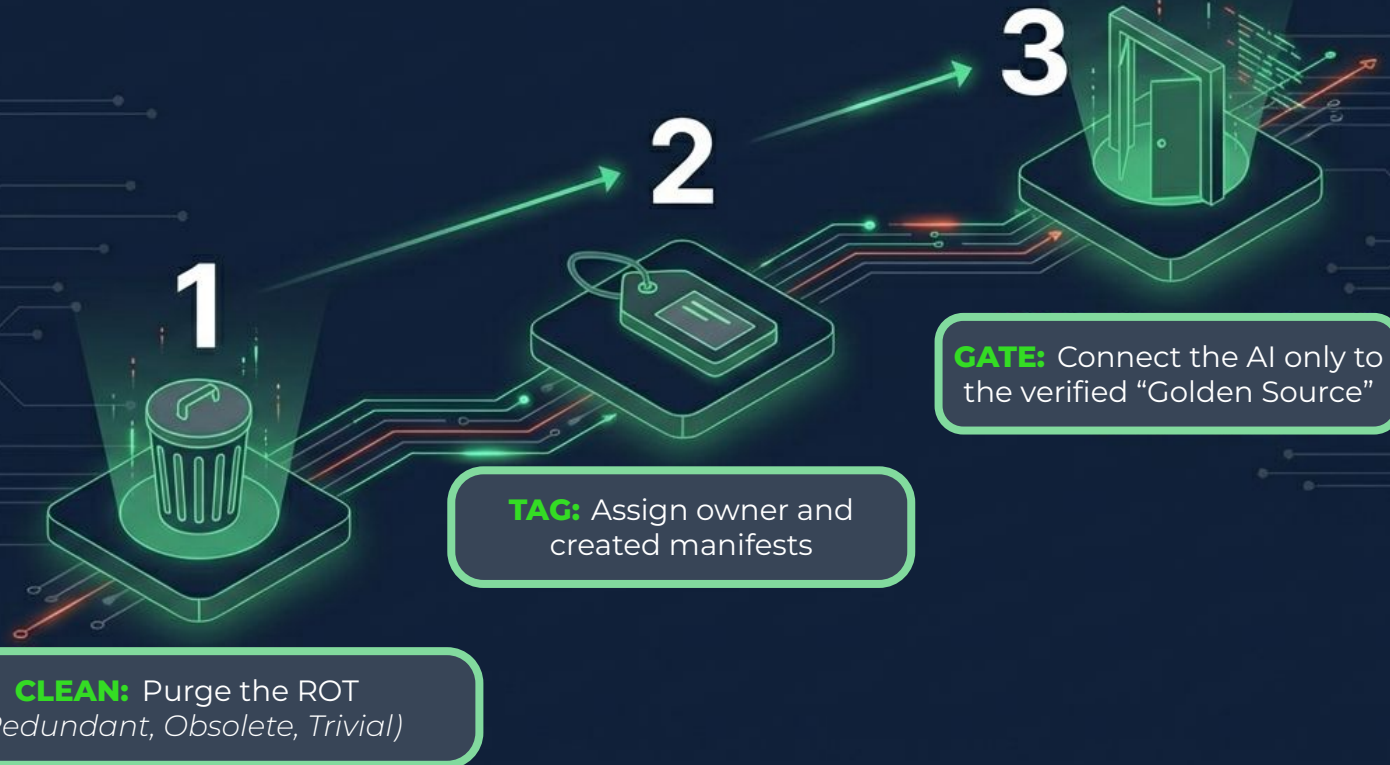

The Smart Assistant **Paradox**

Why state-of-the-art technology fails without managed knowledge?

✓ Let's illustrate a **RAG process** with a proper **KM**!

Your Monday Morning Plan

From Chaos to Confidence

- * *Treat Knowledge as a Product*
- * *Enforce the Manifest*
- * *No Safety Net = No Agentic AI*

Ready for the Age of Agents

KM is the infrastructure of truth

Move from a File-based culture
(Storing PDFs)

To a Knowledge-based culture
(Managing Truth)

Don't build a smarter Chatbot.
Build a smarter Business.
