Can GRC keep up?

Different Perspectives

Our mission: close the gap

GRC

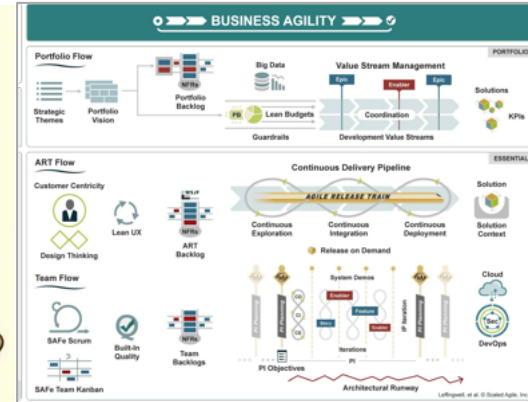

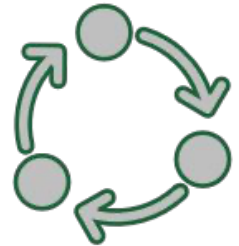

Development

Challenges for GRC to keep up

- Governance and cadence
- GRC lives in separate tools
- Lack in context
- Hard to scale

2. GRC still lives in documents or separate tools

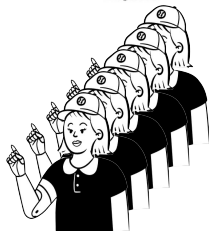

2. Risk Matrix vs ROAM

teams

3. Lack in context

Oh no, we just got
another checklist to
fill out!

4. Hard to scale, 1:100

Can we learn from challenges in the past?

Where are we today?

- DevOps gave us the ability to move fast.
- With Gen AI, we are in the middle of a new paradigm shift

If an i

Developer tools / Currently Mostly AI

AI in the development workflow

Outcome

But, there are also concerns

Conclusions...

- AI is widely adopted and used frequently
- AI is used to get tedious work done
- Developers are concerned about stability and doing things right ☐ GRC

Where do we need to be?

1. Aligning ways of working
