

The AI-supported path to continuous improvement

- ITERATION IN VERY FAST CYCLES, E.G. SKYGUIDE EVERY 3 MONTHS, TESLA 100 TIMES PER DAY

AI Capabilities – Usage Areas

WE USE AI TO IMPROVE PROCESS CONTROL IN FORMALLY DESCRIBED QUALITY MANAGEMENT SYSTEMS (QMS)

1. AI Companion: Dialog-based context search and question answering

- Improves access to information and knowledge.
- Based solely on a specific, contextual QMS
- Suggest follow-up questions
- Offers backlinks to origin (e.g. Applied SAFe)

2. Role based questionnaires and training videos:

- Provide role based personalized learning
- Based on defined 'Way of Working' in QMS
- Provides appropriate employee training

3. AI-Based Compliance and Adherence

- Process Audits: Are processes fully aligned with industry standards?
- Operational Assessment: Verify process adherence with real content.

Continuous QMS Compliance Audits

MAP/ASSESS A QMS AGAINST ANY KIND OF STANDARD OR REGULATIONS WITHIN HOURS – INSTEAD OF YEARS

Assessment Tracking & Trends

- The Dashboard offers a near real-time assessment and compliance overview, enabling QMS experts to monitor how process updates impact adherence to industry standards through regular audits.

Automated Quality & Compliance Checks

- Automated quality and compliance checks streamline assessments by automatically evaluating processes against standards, regulations and best practices, ensuring quick, consistent assessments while reducing manual effort to focus on addressing gaps.

Enable changes to your 'way of working' in near-realtime, without compliance risks

Simplify audits, strengthen results

AUTOMATED, ACCURATE AND ACTIONABLE AUDITS

Conduct an audit of your QMS

- Initiate a comprehensive audit of your quality management system (QMS) by defining the target area and applicable standards.

Discover

- Areas for improvement
- Strengths of your QMS

Is your way of working compliant with the regulations?

AUTOMATED, ACCURATE AND ACTIONABLE AUDITS

The screenshot displays the PEDCO AUDITPRO interface. The breadcrumb trail at the top reads: Audits > Report (6x01ba) > 5 Supporting Processes > 5.8 Review management > 5.8.2 BP_Review management strategy. Below this, the standard is identified as ASQMS / QMS Repository: Applied SAFe 6.0.

The left sidebar contains a navigation menu with items: Dashboard, Quality Management..., QMS Repositories, QMS Compliance..., Project Adherence..., Project Repositories, Project Checklists, Project Audits, Standards, Tasks, Administration, and Contact Support.

The main content area is titled 'From the standard' and shows the 'Criterion Name' as '5.8.2 BP_Review management strategy'. The 'Criterion Description' states: 'The organization shall formulate the review plan for the review of the review process.' The 'Notes' section includes: 'The joint review shall be conducted at specific circumstances and needs of each department. The joint review may be conducted considering technical changes, etc.'

An 'Assessment of the criterion' section shows a 'Rating' of 80% with a corresponding gauge chart. Below this, a text block states: 'The QMS provides a systematic and well-documented review process, assessment of process and product status is supported in context but lacks detailed, explicit references to a formal 'review plan' document as this attribute is optional. Overall, the QMS is compliant with the review process framework.'

A 'Recommendations' section is highlighted with a red box, containing two items: 'Define and document a formal, organizational review process' and 'Establish explicit process steps or guidelines for the review process framework.'

The 'Rating Details' section is also highlighted with a red box, showing a 'QMS Content Mapping' link.

The 'Content Mapping' table is as follows:

Source Document	Attributes Covered	Relevance Rating	Relevance Level	Relevance Level Explanation
Process > Guidance > Practices > Governance > Adapting Governance Practices to Support Agility and Lean Value of Flow	Formulate review plan, Assess process and product, Conduct joint review at milestones	80%	Strong	The content offers clear and specific insights regarding milestone reviews and the importance of stakeholder involvement, which materially supports the assessment of the review management strategy. It addresses relevant aspects such as ongoing assessments and stakeholder engagement, but does not detail how the review plans are formulated, leading to a strong but not conclusive relevance to all parts of the criterion.
Process > Work Products > Release Management > Planning Interval	Formulate review plan, Assess process and product, Conduct joint review at milestones, Deliverables and review requirements	75%	Strong	The content provides specific references to the activities that occur during the Planning Interval, showing an understanding of the review management strategy required by the criterion. It highlights the planning and execution phases which align closely with assessing processes and conducting milestone reviews. While it supports many of the criterion aspects, it lacks explicit reference to formulating a review plan completely, which prevents it from attaining the highest level of decisiveness.
Process > Workflows and Activities > Planning Interval Execution > Inspect & Adapt	Formulate review plan, Assess process and product, Conduct joint review at milestones	75%	Supportive	The content provides relevant aspects of the review process through the framework of the Inspect and Adapt event, including methodical collection of metrics and feedback loops. It comprehensively outlines roles, activities, and an iterative approach to improvement, but lacks sufficient specificity about the review plan formulation and milestone reviews to achieve a higher rating.

Analyze the results

- Uncover compliance gaps
- Areas for improvement
- Strengths of your QMS

Consolidate recommendations

- Review each audit recommendation.
- Get insights on how regulations are mapped.

Improve with AI suggestions

- Follow the guidance of the AI assistant to make specific improvements or customizations of your way of working.

Adherence – Are your endeavours working accordingly to definition?

AUTOMATED, ACCURATE, AND ACTIONABLE ASSESSMENTS

Real-Time Assessment Tracking & Process Adherence Insights

- Provides a unified, real-time view of process adherence, and evidence completeness across your projects/endeavours.
- Dashboards highlight coverage, gaps, trends, and risks—making it easy to monitor how changes affect compliance over time.

Automated Mapping, Evidence Assurance & Quality Checks

- AI powered analysis of documents, templates, and outputs to automatically map content to standards and process steps.
- Validate template usage, detect missing evidence, flag inconsistencies, and evaluate content quality—ensuring accurate and reliable assessments with minimal manual effort.

Checklist Items & File Assignments

Document checklist items and their assigned files with version information

Smart Matching Memory
AI memorizes your choices to improve future document matching for your organization.

Title	Assigned File	Content Analysis	Specificity	Clarity	Consistency	Coverage	Versions
System Design Specification	MS_SystemDesignSpec_v1.0_20250807.docx	Completed	9%	9%	10%	7%	1

Adherence – What's in the content for real?

Content Analysis Scores

Coverage

The section includes a version and a minimal change description but omits date, author, and approval information. It does not follow a structured revision history format, leaving key expected elements missing.

Coverage Details

Attribute	Score	Reasoning
Maintain version and date	50%	Version v1.0 is provided, but the date is missing.
Capture author	0%	No author or contributor information is included.
Describe change	60%	A brief change description ('Initial release') is present but lacks detail.
Record approval	0%	No approval or sign-off details are recorded.

Specificity

Content is terse and lacks concrete details such as dates, names, and approval references. The change description is generic and not actionable.

Clarity

The intent (initial release v1.0) is understandable, but the lack of structure and missing fields reduces overall clarity for traceability.

Consistency

No internal contradictions are present; the entry is consistent with a revision note but incomplete relative to the template's purpose.

Recommendations

Maintain version and date :

Add the date corresponding to version v1.0 and ensure future entries include both version and date. Dates are essential for tracking when changes were made and are an explicit template expectation.

Capture author :

Include the author or contributor responsible for the change for each revision entry. Author information supports accountability and meets the template requirement.

Describe change :

Expand the change description to include specific modifications, scope impacted, and rationale if applicable. More detailed descriptions make the revision history actionable and informative.

Record approval :

AUTOMATED, ACCURATE, AND ACTIONABLE ASSESSMENTS

Evidence based content Checks

- AI powered analysis of content (documents, templates, and deliverables) in accordance with defined 'way of working' in your QMS.
- Automatically map content to standards and process steps, validate template usage, detect missing evidence, flag inconsistencies, and evaluate content quality—ensuring accurate and reliable assessments with minimal manual effort.

Actionable Recommendations

- Structured reports with clear process adherence scores, compliance indicators, evidence status, and prioritized improvement recommendations.
- Enables teams to quickly identify root causes, resolve gaps, and implement targeted improvements with confidence.

The top half of the slide features a solid teal background with several thin, white, wavy horizontal lines that create a sense of movement and depth.

5. Outlook: From Paper Compliance to Continuous Assurance

Compliance is not a control problem – it is a FLOW problem

Three Moves for Executives this Quarter

EDUCATE & IDENTIFY

- ✓ Learn about relevant legal concepts.
- ✓ Understand the current Compliance situation.
- ✓ Do **not** rely solely on the legal department to translate tech & business risks.

ASSESS & CLASSIFY

- ✓ Assess **your** current situation (risk-based assessment) to identify critical elements.
- ✓ Clarify the strategic value of compliance in your organization.
- ✓ Classify relevant compliance topics across entire value stream.

ACT & BAKE-IN

- ✓ Communicate the strategic value of compliance.
- ✓ MVC with cross-functional teams, focus on high-risk areas first.
- ✓ Investigate tools for automating compliance on the value stream.

Don't wait for the audit. Operationalize MVC today.

THANK YOU

Examples of C4AI4C

The State of AI in 2025 (McKinsey)

Rising risk exposure **outpaces** mitigation

- More than half of organizations report at least one AI-related negative incident, primarily tied to inaccuracies, regulatory compliance gaps, explainability issues, and IP risks, while mitigation practices lag.

High performers run mature **governance**

- Leading companies maintain defined validation processes and precise rules for when human oversight is required.

Low enterprise maturity amplifies **control gaps**

- Only one-third of companies have scaled AI across the enterprise.

Establish a QMS for a Lean Agile Organization

A LEAN QMS – as a digitally integrated and AI-enabled IMS

Transforming Compliance into a Strategic Advantage

**Reduce Audit
Cycle Time by
90%**

Streamline compliance processes and free up valuable resources by automating manual tasks, allowing your team to focus on strategic growth.

**Minimize
Compliance
Risks**

Ensure full regulatory alignment with AI-powered compliance mapping, reducing the risk of fines and governance issues before they arise.

**Cut
Compliance
Costs by 40%**

Reduce the cost of audit preparation and compliance management while strengthening market trust and operational resilience.

Quality has been a topic for decades

- Customer satisfaction
- Competitive advantage
- Defect reduction
- Compliance - Adherence with standards and regulations.
- Continuous improvement
- Risk management
- Cost savings - Error prevention and efficient processes
- Market access - Certifications in order to gain access to markets.
- Reputation and trust
- Employee commitment
- Product life cycle - From development to disposal.
- Efficiency - Standardize processes and make them more efficient.
- Innovation - Detect and rectify errors more quickly.
- Globalization - International quality standards for different markets

Scaled Agility in Regulated Environments

VARYING LEVELS OF CRITICALITY, FROM SAFETY-CRITICAL TO SECURITY-CRITICAL

- **Quality:**
Have a managed process & established QMS / IMS
- **Safety and Security:**
Transparency in Execution & Continuous Compliance
- **Effectiveness:**
Manage Process & Solution variations, reduce waste and do exactly what is needed
- **Traceability:**
Ensure process & product compliance
- **Verification and Validation:**
Engineering based on Principles & Practices
- **Agile Contracting**
Collaboration is established with agile contracts
